

MODEL: STL-A DESIGN & CONSTRUCTION FEATURES

Model STL-A Extruded Aluminium Sand Trap Louver are designed for removal of dust and sand particles. A double layer of vertical blades design provides low pressure drop, high sand removal efficiency and vision proof design.

Standard Construction

Frame:

100 mm deep channel, 2.0 mm thick aluminium steel

Blades:

2.0 mm thick Aluminium steel, vertical, sight proof

Screen:

13 mm removable expanded aluminium bird screen. Located on interior

Construction:

Mechanically fastened

Finish: Mill

Dimensions:

Single Section Size:

Minimum size: 300 mm x 300 mm Maximum size: 2400 mm x 2400 mm

Maximum multiple section size: Unlimited "W" (width) and "H" (height) are opening sizes. Louvers are made 6 mm undersized.

Options

- Galvanized Construction
- Variety of Bird and Insect Screens
- 304 or 316 Stainless Steel Construction
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinaed Frame
- Clip Angles
- Selection of Finishes: Super Durable Polyester Powder coatings, Kynar/PVF and anodized.

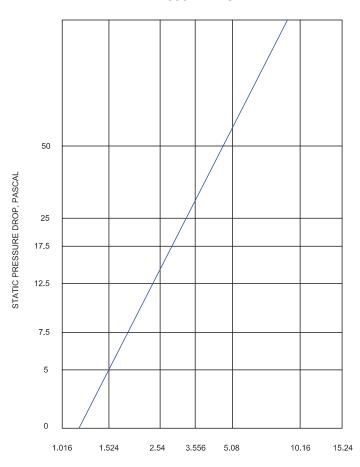

- Low pressure drop
- Sand efficiency removal of approximately 90% measured during tests described in AASHRAE Standard 52-776 test method.
- Sight proof design.
- Withstand a basic wind speed of 145 KKPH (equivalent of a wind load of 0.966 kPa)

MODEL: STL-A PERFORMANCE DATA

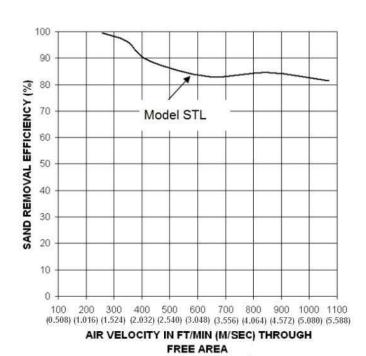

Below STL-A performance charts are based on tests performed at Cert-Aire Laboratory at Arlington Heights, Illinois based on AMCA Publication 511 for Air Performance and Water Penetration and ASHRAE Standard 52-76 for sand removal.

MODEL: STL DESIGN & CONSTRUCTION FEATURES

Description

Model - STL Sand Trap Louver are designed for removal of dust and sand particles. A double layer of vertical blades design provides low pressure drop, high sand removal efficiency and vision proof design.

Standard Construction

Frame:

100 mm deep channel, 1.2 mm thick galvanized steel

Blades:

1.2 mm thick galvanized steel, vertical, sight proof

Screen:

13 mm removable expanded aluminium bird screen. Located on interior

Construction:

Mechanically fastened and welded

Finish:

Mill with touch up on welds

Dimensions:

Single Section Size:

Minimum size: 300 mm x 300 mm Maximum size: 2400 mm x 2400 mm

Maximum multiple section size: Unlimited "W" (width) and "H" (height) are opening sizes. Louvers are made 6 mm undersized.

Options

- Aluminum Construction
- 1.6 mm Galvanized Steel Construction
- Variety of Bird and Insect Screens
- 304 or 316 Stainless Steel Construction
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinged Frame
- Clip Angles
- Selection of Finishes: Super Durable Polyester Powder coatings, Kynar/PVF and anodized.

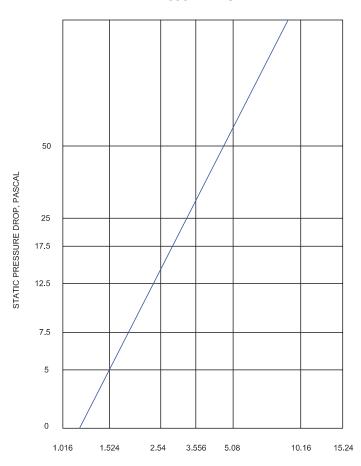

- Low pressure drop
- Sand efficiency removal of approximately 90% measured during tests described in AASHRAE Standard 52-776 test method.
- Sight proof design.

MODEL: SSL DESIGN & CONSTRUCTION FEATURES

Description

Model - SSL Sand Storm Louvers are designed for removal of wind driven sand particles. The SSL is designed to capture sand particles and remove them without the need for bleed fans to eliminate the collected sand. The SSL is 99% efficient at free are velocities 3 to 4 times higher than other sand elimination products.

The vertical chevron blade and hook provide maximum elimination with minimum resistance. As the air passes easily over the curve of the blade, the hook captures the particle, and gravity carries the particles in to the drain pan and out of the louver.

Standard Construction

Frame:

2.0 mm thick extruded aluminum 200 mm deep

Blades:

1.6 mm thick extruded aluminum vertical, sight proof

Construction:

Welded Construction

Finish:

Mill with touch up on welds

Dimensions:

Minimum size: 300 mm x 450 mm Maximum size: 1200 mm x 2400 mm

or 3000 mm x 1200 mm

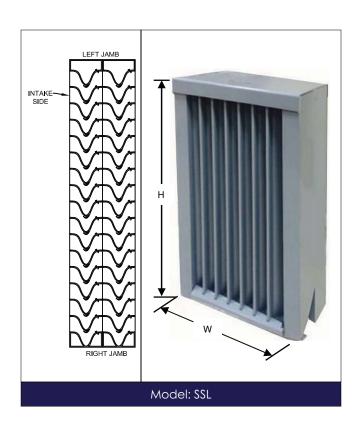

Multiple section sizes available

"W" (width) and "H" (height) are opening sizes.

Louvers are made 6 mm undersized.

Options

- Bird or Insect Screen (available as an option, but it is not required due to narrow blade spacing)
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinged Frame
- Clip Anales
- Selection of Finishes:
 Super Durable Polyester Powder coatings, Kynar/PVF and anodized.

- Low pressure drop, tested in accordance with AMCA Publication 511
- Tested for Sand Removal Efficiencies at up to 1600 fpm Velocity.
- Sand efficiency removal of approximately 99% measured during tests described in ASSHRAE Standard 52-776 test method.
- Sight proof design.
- Withstand a basic wind speed of 145 KKPH (equivalent of a wind load of 0.966 kPa)

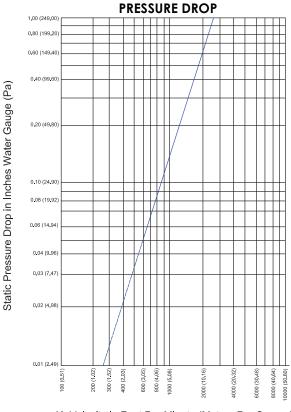

MODEL: SSL PERFORMANCE DATA

Below SSL performance charts are based on tests performed at Cert-Aire Laboratory at Arlington Heights, Illinois based on AMCA Publication 511 for Air Performance and Water Penetration and ASHRAE Standard 52-76 for sand removal.

Data based on 24 x 24" (610 x 610 mm) louver. Test duration 15 minutes.								

Both maximum recommended free area velocity and beginning of water penetration are 822 fpm at standard air- 075 lbs. per cu. ft. The above water penetration data is based on mill finish, 48" x 48" test size.

MODEL: STL-8 DESIGN & CONSTRUCTION FEATURES

Description

Model STL-8 Heavy Duty Sand Louvers are designed for removal of wind driven sand particles. The STL-8 is designed to capture sand and dust particles and remove them without the need for bleed fans to eliminate the collected sand. The STL-8 is 99% efficient at free area velocities 3 to 4 times higher than other sand elimination products. The double vertical sight proof blades provide 53% free area, maximum elimination, minimum pressure drop and architecturally pleasing appearance.

Standard Construction

Frame:

0.81" (2.0 mm) thick extruded aluminum 8" (203 mm) deep

Blades:

0.81" (2.0 mm) thick extruded aluminum Double vertical, sight proof

Screen:

Removable expanded aluminium bird screen. Located on interior

Construction:

Welded Construction

Finish:

Mill with touch up on welds

Dimensions:

Single Section Size:

Minimum size: 12" (305 mm) x 12" (305 mm) Maximum size: 96" (2438 mm) x 120" (3048 mm)

Multiple section sizes available

"W" (width) and "H" (height) are opening sizes.

Louvers are made 6 mm undersized.

Model: STL-8

Options

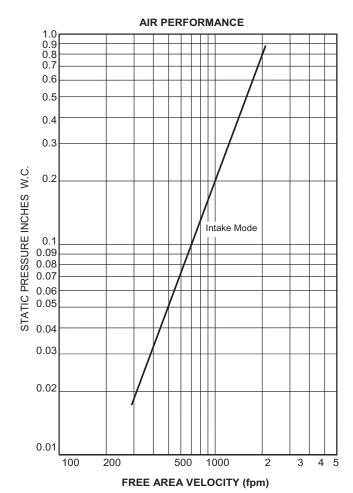

- Bird or Insect Screen
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinaed Frame
- Clip Angles
- Selection of Finishes:
 Super Durable Powder coatings,
 Kynar/PVF and anodized.

- 53% Free Area, 1200 x 12000 mm Test Size
- Low pressure drop, tested in accordance with AMCCA Publication 511
- Tested for Sand Removal Efficiencies at up to 1400 fpm Velocity.
- Sand efficiency removal of approximately 99% measured during tests described in ASSHRAE Standard 52-776 test method.
- Sight proof design.
- Withstand a basic wind speed of 145 KKPH (equivalent of a wind load of 0.966 kPa)

MODEL: STL-8 PERFORMANCE DATA

Below STL-8 performance charts are based on tests performed at Cert-Aire Laboratory at Arlington Heights, Illinois based on AMCA Publication 511 for Air Performance and Water Penetration and ASHRAE Standard 52-76 for sand removal.

MODEL: L-4 DESIGN & CONSTRUCTION FEATURES

Description

Model L-4 Stationary Louver is a weather louver designed to protect air intake and exhaust openings in building exterior walls. Design incorporates stationary non-drainable blades, sloped sill and high free area to provide maximum resistance to rain and weather while providing minimum resistance to airflow.

Standard Construction

Frame:

100 mm deep channel, 2.0 mm thick extruded aluminum

Blades:

2.0 mm thick extruded aluminium 37° and 45° angle on 100 mm centres

Screen:

13 mm removable expanded aluminium bird screen. Located on interior

Construction:

Mechanically fastened and welded

Finish:

Mill with touch up on welds

Dimensions:

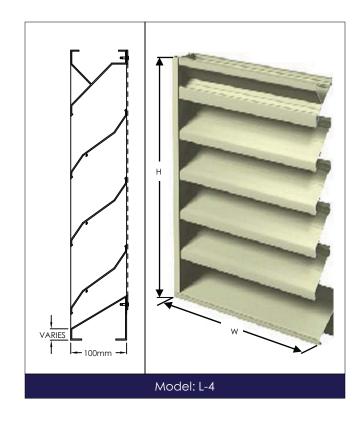

Single Section Size:

Minimum size: 300 mm x 300 mm Maximum size: 2400 mm x 2400 mm

Maximum multiple section size: Unlimited "W" (width) and "H" (height) are opening sizes. Louvers are made 6 mm undersized.

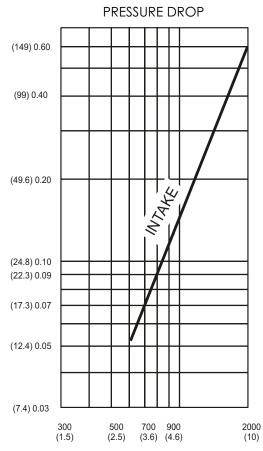

Options

- 6" (152 mm) deep channel
- Variety of Bird and Insect Screens
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinged Frame
- Clip Angles
- 3.0 mm Thickness Aluminum Construction
- Selection of Finishes: Super Durable Polyester Powder coatings, Kynar / PVF and anodized.

MODEL: L-4 PERFORMANCE DATA

Free Area: 51% for 448" x 48" (1..22m x 1.22mm) test size.

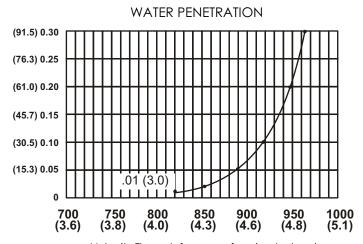

Velocity Through free area fpm (meter/sec.)

Standard air - .075 lbs. per cu. ft. Ratings do not include the effect of a bird screen

WATER PENETRATION

Velocity Through free area fpm (meter/sec.)

Both maximum recommended free area velocity and beginning of water penetration are 1026 fpm (5.21 m/s) at standard air-075 lbs. per cu. ft. The above water penetration data is based on mill finish, 48" x 48" test size.

MODEL: L-4S DESIGN & CONSTRUCTION FEATURES

Description

Model L-4S is a weather louver designed to protect air intake and exhaust openings in building exterior walls. Design incorporates steel stationary non-drainable blades, sloped sill and high free area to provide maximum resistance to rain and weather while providing minimum resistance to airflow.

Standard Construction

Frame:

4" (102 mm) deep channel, 16 gauge (1.6 mm) thick galvanized steel

Blades:

16 gauge (1.6 mm) thick galvanized steel 45° angle on 4" (100 mm) centres

Screen:

13 mm removable wire mesh Bird screen. Located on interior

Construction:

Mechanically fastened and welded

Finish:

Mill with touch up on welds

Dimensions:

Single Section Size:

Minimum size: 12" x 12" (300mm x 300mm) Maximum size: 96" x 96" (2400mm x 2400mm)

Maximum multiple section size: Unlimited "A" (width) and "B" (height) are opening sizes. Louvers are made 6 mm undersized.

Options

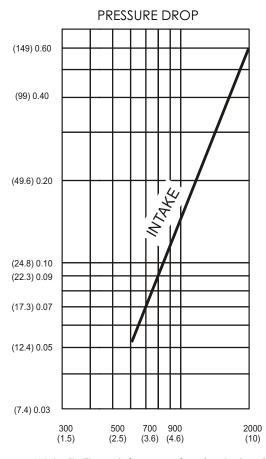

- 6" (152 mm) deep channel
- Variety of Bird and Insect Screens
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinged Frame
- Clip Anales
- Stainless Steel Construction
- Selection of Finishes: Super Durable Polyester Powder coatings, Kynar and PVF.

MODEL: L-4S PERFORMANCE DATA

Below performance charts are based on tests performed at Cert-Aire Laboratory at Arlington Heights, Illinois based on AMCCA Publication 511 for Air Performance and Water Penetration.

Free Area: 51% for 448" x 48" (1..22m x 1.22mm) test size

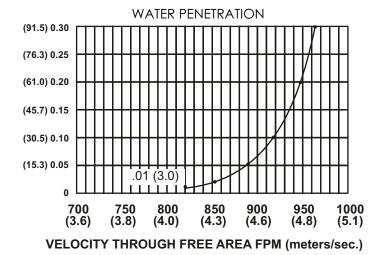

Velocity Through free area fpm (meter/sec.)

Standard air - .075 lbs. per cu. ft.
Ratings do not include the effect of a bird screen

Both maximum recommended free area velocity and beginning of water penetration are 822 fpm at standard air- 075 lbs. per cu. ft. The above water penetration data is based on mill finish, 48" x 48" test size.

MODEL: ACL DESIGN & CONSTRUCTION FEATURES

Description

Model ACL Acoustical louvers are designed to provide optimal noise reduction with minimal airflow restrictions. Acoustically insulated blades and varying louver depths provide sound attenuation as well as protect against weather penetration with an architecturally pleasing appearance.

Standard Construction

Frame:

150 mm, 200 mm, 300 mm deep, channel type, 2.0 mm thick formed aluminum.

Blades:

2.0 mm thick formed aluminum, positioned at 45° angle.

Acoustic Infill:

Fiberglass Insulation.

Insulation Cover:

Perforated Aluminum.

Screen:

Removable expanded aluminum bird screen. Located on interior.

Construction:

Mechanically fastened.

Finish:

Mill with touch up on welds

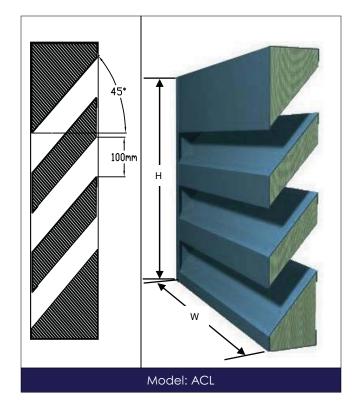

Dimensions:

Minimum size: 300 mm x 450 mm

Maximum size:

1500 mm x 2400 mm

Multiple section sizes available "W" (width) and "H" (height) are opening sizes. Louvers are made 6 mm undersized.

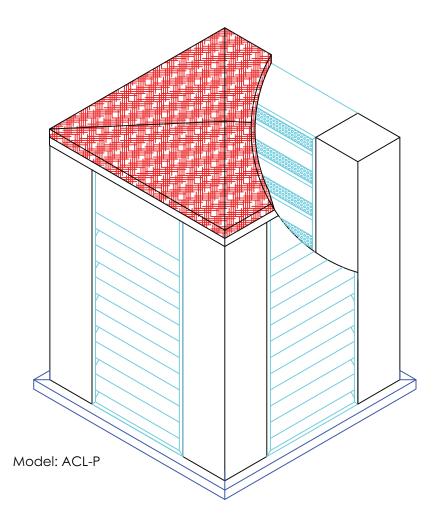

MODEL: ACL DESIGN & CONSTRUCTION FEATURES

Options

- Formed Steel Construction
- Stainless Steel Construction
- Variety of Bird and Insect Screens
- Flanged Frame
- Filter Rack
- Washable Filters
- Hinged Frame
- Clip Angles
- Selection of Finishes: Super Durable Polyester Powder coatings, Kynar/PVF and anodized.

Special Application

Acoustic Louver Penthouse

MODEL: ACL PERFORMANCE DATA

ACL Performance Data

Below ACL performance charts are based on tests performed at Cert-Aire Laboratory at Arlington Heights, Illinois based on AMCA Publication 511 for Air Performance and Water Penetration.

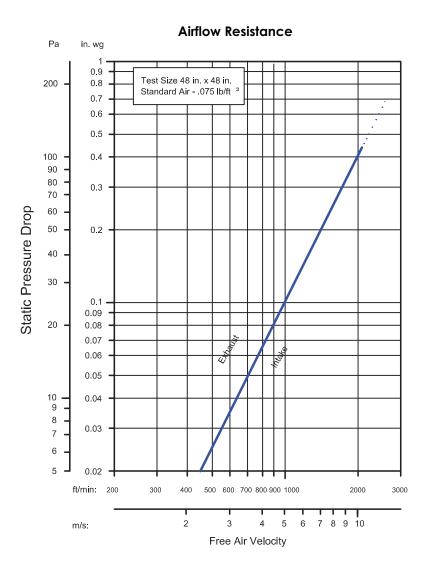

Aerodynamic Performance

Free Area:

Total open area of a louver after subtracting all obstructions - blades and frame

Airflow Resistance:

Pressure Differential across the louver at various free area velocities

MODEL: ACL PERFORMANCE DATA

ACL Performance Data

Water Penetration:

First Point of Water Penetration is the point at which a louver first allows the passage off water through the louver. It is measured by the air intake velocity at which the louver will begin leaking.

Frame Thickness (mm)	Free Area (%)	Beginning of Water Penetration (m/s)	Pressure Drop (Pa) (at beginning of Water Penetration Velocity)		
150	34	4.06	16		
200	30	4.57	18		
300	26	5.00	23		

Acoustic Performance

Sound Transmission Class ((STC):

The Sound Transmission Class (SSTC) is a rating of the effectiveness of an assembly in isolating or reducing airborne sound transmission. STC is a single number that summarizes airborne sound transmission loss data. Assemblies with higher STC ratings are more efficient at reducing sound transmission. STC is determined iin accordance with ASTMM E413-04.

Transmission Loss:

Transmission loss (TLL) is a measurement of the reduction of sound power transmission (dB) through an assembly at a given frequency. The more sound power that is reduced, the greater the TLL. TL is tested in accordance with ASTM EE90-04.

Noise Reduction:

Difference between the sound pressure level on the noise source side of the louver and the free field sound pressure level on the receiver side of thee louver

Thickness	Noise Reduction (dB)											
(mm)	125Hz	250Hz	500Hz	1000Hz	2000Hz	4000Hz	STC					
150	10	10	12	16	23	18	10					
200	11	11	13	19	28	20	12					
300	13	12	17	25	36	25	16					

IGC Aire Louvers

- Acoustic Louver

Special Louvers

About Us IGC manages a sophisticated, global network of independent distributors, sales agents, assembly programs, technology agreements and offshore manufacturing for each product division. All locations are staffed with expert engineers and sales professionals who understand the unique requirements of each market. Our products are on the cutting edge of technology. Research and development is a way of life. We are constantly looking for ways to improve current products and introducing new products to satisfy our ever-changing business environment. Quality is built into all of our products. Statistical process control systems incorporate state-of-the-art computerized data gathering technology to assure performance and measure dimensional accuracy of each component. The finished product, in many instances, exceeds accepted standards, local codes or customer specifications. The combination of an established global network, state-of-the-art products, constant research and development, and built-in quality has placed us ahead of our competition. We are committed to our customers we are service, we are quality, we are price. A team dedicated to solving customer problems and providing satisfaction.
